jQuery : Introduction

jQuery permet de faire beaucoup tâches JavaScript avec beaucoup moins de lignes de code. jQuery simplifie également beaucoup de choses complexes en JavaScript, comme les appels AJAX et la manipulation DOM.

La bibliothèque jQuery contient les fonctionnalités suivantes:

- ✓ Manipulation HTML / DOM
- ✓ Manipulation de CSS
- ✓ Méthodes d'événement HTML
- ✓ Effets et animations
- ✓ AJAX

jQuery : Utilisation

```
<!DOCTYPE html>
<html>
<head>
<script src="https://ajax.googleapis.com/ajax/libs/jquery/3.3.1/jquery.min.js"></script>
<script>
$(document).ready(function(){
    $("button").click(function(){
        $("p").hide();
    });
});
</script>
</head>
<body>
<p>Paragraphe 1</p>
<p>Paragraphe 2</p>
<button>Tester</button>
</body>
</html>
```

jQuery : Syntaxe de base

```
<!DOCTYPE html>

<script src="https://ajax.googleapis.com/ajax/libs/jquery/3.3.1/jquery.min.js"></script>
<script>
    $(document).ready(function(){
        $("button").click(function(){
            $(this).hide();
            $("p").hide();
            $(".ma_classe").hide();
            $("#mon_id").hide();
        });
    });

jQuery : Exercice 1

Ecrivez un texte s'agrandissant en lui cliquant dessus.

Si on reclique dessus, il reprend sa taille initiale.

Mon texte qui s'agrandit

Mon texte qui s'agrandit

jQuery : Exercice 2

This is some text in the div.

This is a paragraph in the div.

This is another paragraph in the div.

jQuery : Exercice 2

Créez 4 boutons et un rectangle. Chaque bouton provoque une action sur le rectangle.

- Bouton 1 : met le rectangle en vert
- Bouton 2 : met le rectangle en bleu
- Bouton 3 : met le rectangle en rouge
- Bouton 4 : met le rectangle en orange

[Vert](#) | [Bleu](#) | [Rouge](#) | [Orange](#)

jQuery : Exercice 3

Créez une liste d'éléments. L'élément sélectionné change de style.

NB : Lorsque on clique sur un élément, tous les éléments reprennent le style de initial, hormis l'élément courant.

En gros, il faut faire en sorte que quand on clique sur un ``, on mette une classe "active" sur le ``. Pour ajouter une classe, on peut utiliser `addClass()`, pour en retirer une, `removeClass()`.

Paris

Lille
